{ VII. FAQ }

1. I can't use the stylus to control the cursor.

a. Does the tablet's status indicator light come on when the stylus is in contact with the working area?

Yes: Uninstall the Star 06 driver. If its uninstaller will not run, run the driver's installer again, then uninstall. Reboot, then connect the tablet to your computer and test your stylus. If the cursor responds to your pen input, the tablet's hardware is functional. Reinstall the Star 06 driver according to these steps (Windows):

Download the tablet's latest driver from www.xp-pen.com, then extract the ".zip" contents to the desktop.

Close all non-essential software and processes (Some software may use the wintab process and interfere with the driver installation. OneDrive in particular often causes issues; its system tray icon looks like two grey clouds.).

Open C:\Windows. Using the "search" box near the top-right of the window, search for "WinTab32.dll" and delete any instances.

Connect the tablet and power it on, then run the driver installation. Complete the installation, then reboot.

2. The Star 06's response time is slow during wireless USB use.

a. The tablet's battery may be running low. Test the tablet in wired USB mode.

3. How do I know that the Star06 driver installed successfully?

a. After installing the driver, the Star 06's driver icon  should be visible in your system tray on the bottom-right of your screen (Windows OS). Pen input will control the cursor and pressure sensitivity will be functional in the driver UI's "Pressure Test" tab.

4. How do I determine if a problem is software or hardware related?

a. Connect and install the Star 06 on a different computer. If the tablet functions properly on the new computer, you are experiencing a software issue—confirm that ALL tablet drivers (including the Star 06) are uninstalled and removed from your computer, then reinstall the Star 06.

b. The Star 06's indicator lights will help you determine if an issue is hardware-related. When functioning properly, the white status indicator light will light up when the stylus pen is in range of or touching the tablet's working area. If the light does not turn on under these conditions while the Star06 is powered ON, you may be experiencing a hardware issue.
